PROFESSIONAL SUMMARY

Senior ICT leader with 20 years' experience spanning internal IT delivery, enterprise solutions, and digital transformation across higher education, government, utilities, and large enterprise. Proven track record leading multidisciplinary delivery teams, owning ICT portfolios and budgets, and partnering with senior business leaders to align technology investment with organisational strategy.

Currently leading public sector engagements at Cloudflare across QLD/NT, with deep expertise in enterprise applications, Zero Trust security, AI strategy, and the modernisation of regulated-environment ICT estates. Equally comfortable in the boardroom shaping investment roadmaps and, on the floor, mentoring delivery teams. Practical, outcomes-driven, and energised by complex transformation programs where technology must deliver real business value.

CORE CAPABILITIES

Portfolio & Delivery ICT project portfolio leadership · roadmap development · delivery framework governance · vendor and contract management · technology lifecycle management · budget ownership

Enterprise Applications & Platforms ERP and CRM platforms · safety and operational systems · enterprise integration · data governance · application lifecycle · cloud and hybrid environments

Leadership & Strategy people leadership · team development · executive stakeholder engagement · governance forums · commercial negotiation · strategic translation

Transformation & Innovation AI strategy (Generative, Agentic, Inference) · Zero Trust security · workforce transformation · digital transformation · data centre and edge modernisation · public sector procurement

PROFESSIONAL EXPERIENCE

Senior Named Account Executive — Public Sector QLD/NT

October 2025 – Present

Cloudflare, Australia

- Lead strategic sales engagements with Queensland and Northern Territory government agencies on enterprise modernisation, including infrastructure consolidation, Zero Trust security, and AI workflow enablement.
- Partner with executive stakeholders to shape multi-year technology roadmaps that balance security, performance, and cost across hybrid and edge environments.
- Advise on data governance, compliance, and the secure adoption of AI and agentic workflows within regulated and sovereign environments.

Dell Technologies

December 2017 – October 2025

State and Federal Government, Utilities, Higher Education, and Large Enterprise — Australia & New Zealand

AI Solutions Strategy (NVIDIA & AMD), ANZ

2024 – 2025

- Led AI solutions strategy across Australia and New Zealand for Dell's strategic AI portfolio in partnership with NVIDIA and AMD.
- Advised executive customers on AI investment and mission-aligned roadmaps spanning training, inference, agentic workflows, and the underlying data, networking, and storage foundations required for production-grade outcomes.
- Developed and delivered enablement programs that lifted internal sales and technical capability across the ANZ business.

Principal Solutions Executive

2022 – 2024

- Owned the data centre account strategy and sales GTM for Dell's Infrastructure portfolio across various Queensland GTM, including multi-million-dollar transformation programs.
- Worked directly with CIOs, ICT executives, and governance teams to shape investment roadmaps, evaluate delivery options, and secure executive endorsement for major initiatives.
- Coordinated with client teams across infrastructure, applications, security, and professional services to support enterprise solutions that deliver customer objectives.

Data Centre Solutions Executive

2021 – 2022

- Individual contributor for data centre sales, covering major Queensland enterprise customers, compute (SME), storage, networking, power, cooling, and lifecycle management.

Senior Systems Engineer / Systems Engineer (Data Centre Hybrid Seller)

2017 – 2021

- Operated in a hybrid technical sales capacity, combining solution architecture with account ownership to drive data centre opportunities across enterprise, public sector, and research customers.
- Architected end-to-end data centre solutions spanning compute, primary and unstructured storage, data protection, networking, virtualisation, and hybrid cloud, tailored to customer workloads and commercial constraints.
- Led specialist engagements in high-performance computing, hierarchical file systems, and long-term data archive, translating complex research and operational requirements into validated, production-ready designs.
- Owned the technical relationship through the full sales cycle — discovery, solution design, RFP and tender responses, proof-of-concept delivery, sizing and configuration, and commercial validation — partnering with account executives to convert pipeline into closed business.
- Acted as a trusted technical advisor to customer architects, infrastructure leads, and ICT executives, bridging vendor capability with customer outcomes and influencing multi-year platform decisions.

Senior IT Manager (and prior roles)

February 2009 – December 2017

The University of Queensland — Institute for Molecular Bioscience, Brisbane

Senior IT Manager

2012 – 2017

- Owned the ICT portfolio for one of Australia's largest multidisciplinary life-science research institutes, with full accountability for budget, investment roadmap, service delivery, vendor performance, and team leadership.

- Led the ICT team covering infrastructure, applications, research computing, end-user services, and information security; recruited, mentored, and developed staff at all levels.
- Set and delivered the ICT investment roadmap in partnership with research leadership and central University governance, balancing operational stability with strategic innovation initiatives.
- Owned vendor relationships and contracts spanning enterprise applications, storage, networking, scientific computing, and managed services; negotiated commercial outcomes and managed lifecycle refresh programs.
- Partnered with central UQ ITS, finance, HR, and research office stakeholders to align Institute systems with enterprise platforms (including ERP, identity, and research administration systems) and University-wide governance frameworks.
- Established service delivery frameworks, change governance, and operational reporting that lifted reliability and transparency across a 24/7 research environment.
- Led major program initiatives including data centre optimisation, large-scale storage and archive transformation, high-performance computing uplift, and end-user workplace modernisation.

Service Delivery Manager 2010 – 2012

- Managed end-to-end ICT service delivery for the Institute, with responsibility for operational performance, incident and change management, and continuous improvement.
- Built strong working relationships with research group leaders and corporate functions to translate business needs into deliverable ICT outcomes.

Desktop Support 2009 – 2010

- Delivered front-line ICT support across a large research community, building deep operational understanding of enterprise services, identity, and end-user technology.

IBM — Technical Support and Customer Relations

June 2006 – February 2009

Brisbane, Australia

- Progressed from Technical Support Officer to Customer Relations Manager and Senior Technical Support, leading L3/L4 support, quality assurance, and customer experience functions.
- Built foundational expertise in enterprise service management, escalation governance, and stakeholder communication in a global delivery environment, serving APJ region.

EDUCATION & PROFESSIONAL DEVELOPMENT

- Focus on information technology and ongoing professional development across enterprise architecture, AI, cybersecurity, and leadership.
- Continuous vendor and industry enablement across cloud, security, AI, and data platforms (Cloudflare, Dell Technologies, NVIDIA, AMD).
